

I am a trained pharmacist and a PhD level pharmaco-epidemiologist with an extensive knowledge of statistics and several years of experience in highly ranked European universities/research centers (Utrecht university, German Cancer Research Center (DKFZ), Institute for Medical Biostatistics, Epidemiology and Informatics (IMBEI), and Center for Thrombosis and Hemostasis (CTH) in Mainz). I have a strong track record of key deliverables (publications, grants, internal/external reports) in my career and I have interests in creative study design (clinical and observational data), meta-analysis, real-world evidence, drug safety studies, personalized medicine, and label extension. I have been active in the fields of cardiology, oncology, hematology, and neonatology. I lived and worked in three countries with a very short-time adaption to new environments.

I am also a proactive, positive, and results-orientated team player with experience of establishing effective relationships and communication networks on international and multi-disciplinary teams.
